Serial No. 10/594,529 Docket No. SH-0069PCTUS

RYU.034

AMENDMENTS TO THE CLAIMS

Please add new claim 18 and amend the claims as follows:

- 1. (Currently Amended) A manufacturing apparatus of a porous glass base material for depositing glass particles produced by subjecting a material gas to flame hydrolysis, onto a starting member placed vertically, wherein a plurality of gas inlets [[are]] is provided in one or more lateral walls of a process chamber including a burner for the deposition therein, in upper portions of the lateral walls and along a ceiling of the process chamber.
- 2. (Currently Amended) The manufacturing apparatus according to claim 1, wherein the plurality of gas inlets [[are]] is provided in lateral walls that oppose each other with a porous glass base material being positioned therebetween.
- 3. (Original) The manufacturing apparatus according to claim 1, wherein slit-like gas inlets are provided in the process chamber, along left and right edges of a lateral wall on which the burner is provided.
- 4. (Currently Amended) The manufacturing apparatus according to claim 1, wherein an exhaust outlet is provided in a lateral wall that opposes [[the]] <u>a</u> lateral wall on which the burner is provided.
- 5. (Original) The manufacturing apparatus according to claim 4, wherein a width of the lateral wall in which the exhaust outlet is provided is smaller than a width of a lateral wall in which a gas inlet is provided.
- 6. (Currently Amended) The manufacturing apparatus according to claim 1, wherein one of the gas inlets is provided in [[the]] <u>a</u> lateral wall in which [[the]] <u>an</u> exhaust outlet is provided, and a distance between a lowest part of the gas inlet and a highest part of the exhaust outlet is 30 mm or more.
- 7. (Currently Amended) The manufacturing apparatus according to claim 1, wherein

Serial No. 10/594,529

Docket No. SH-0069PCTUS

the ceiling and lateral walls of the process chamber along which a gas supplied from the gas inlets flows are formed by have flat surfaces.

3

8. (Currently Amended) The manufacturing apparatus according to claim 2, wherein an exhaust outlet is provided in a lateral wall that opposes [[the]] <u>a</u> lateral wall on which the burner is provided.

- 9. (Original) The manufacturing apparatus according to claim 3, wherein an exhaust outlet is provided in a lateral wall that opposes the lateral wall on which the burner is provided.
- 10. (Currently Amended) The manufacturing apparatus according to claim 2, wherein one of the gas inlets is provided in [[the]] <u>a</u> lateral wall in which [[the]] <u>an</u> exhaust outlet is provided, and a distance between a lowest part of the gas inlet and a highest part of the exhaust outlet is 30 mm or more.
- 11. (Currently Amended) The manufacturing apparatus according to claim 3, wherein one of the gas inlets is provided in [[the]] <u>a</u> lateral wall in which [[the]] <u>an</u> exhaust outlet is provided, and a distance between a lowest part of the gas inlet and a highest part of the exhaust outlet is 30 mm or more.
- 12. (Original) The manufacturing apparatus according to claim 4, wherein one of the gas inlets is provided in the lateral wall in which the exhaust outlet is provided, and a distance between a lowest part of the gas inlet and a highest part of the exhaust outlet is 30 mm or more.
- 13. (Currently Amended) The manufacturing apparatus according to claim 2, wherein the ceiling and lateral walls of the process chamber along which a gas supplied from the gas inlets flows are formed by have flat surfaces.
- 14. (Currently Amended) The manufacturing apparatus according to claim 3, wherein

Serial No. 10/594,529 Docket No. SH-0069PCTUS RYU.034

the ceiling and lateral walls of the process chamber along which a gas supplied from the gas inlets flows are formed by have flat surfaces.

- 15. (Currently Amended) The manufacturing apparatus according to claim 4, wherein the ceiling and lateral walls of the process chamber along which a gas supplied from the gas inlets flows are formed by have flat surfaces.
- 16. (Currently Amended) The manufacturing apparatus according to claim 5, wherein the ceiling and lateral walls of the process chamber along which a gas supplied from the gas inlets flows are formed by have flat surfaces.
- 17. (Currently Amended) The manufacturing apparatus according to claim 6, wherein the ceiling and lateral walls of the process chamber along which a gas supplied from the gas inlets flows are formed by have flat surfaces.
- 18. (New) A manufacturing apparatus of a porous glass base material for depositing glass particles produced by subjecting a material gas to flame hydrolysis, onto a starting member placed vertically, wherein a plurality of gas inlets is provided in upper portions of lateral walls and along a ceiling of a process chamber including a burner for the deposition therein.
